

[Enter Password For The Encrypted File Setup Alias Concept 2010](#)

A screenshot of the YaST2 configuration window titled "YaST2". The window has two tabs: "Use a Directory as Identity Provider (LDAP)" and "Authentication via Kerberos", with the latter being selected. The "Authentication via Kerberos" tab contains several options, each with a checkbox:

- Allow Kerberos Users To Authenticate (pam_krb5)
- Automatically Create Home Directory
- Use DNS TXT Record to Discover Realms
- Use DNS SVC record to Discover KDC servers
- Allow Insecure Encryption (Windows NT)
- Allow KDC on Other Networks to Issue Authentication Tickets
- Allow Kerberos-Enabled Services to Take on The Identity Of a User
- Issue Address-Less Tickets for Computers Behind NAT

Below these options is a section labeled "Default Realm For User Login:" with a dropdown menu currently showing "(not specified)". Underneath is a section labeled "All Authentication Realms" with a large empty text area. To the right of this area is a button labeled "Extended Options". At the bottom left of the window are three buttons: "Add Realm", "Edit Realm", and "Delete Realm". At the bottom right are "Cancel" and "OK" buttons.
